Kye Toussaint

Shoplift is a user-friendly simulated shopping experience that uses AI to improve the user's experience.

Features.

The following functionality is operational:

Menu for user traversal

The user is able to check the inventory of the users shopping cart and see estimated cost

The user is able to search for available items

The user will receive suggestions based on what they're adding to their cart

The user can begin the process of completing the transaction

Set-Up:

The file's should be unzipped and can be loaded on a computer's local python IDE (ensure it is up to date)

The main program file is the file that needs to be executed to run the software.

If this is unsuccessful, the files can be uploaded into a repl.it project

The program should run, but ensure that files are named appropriately

("main program" should be renamed to "main")
